MUHAMMAD HADID WIRANSETYO

Frontend Engineer

Semarang, Indonesia | m.hadid.2001@gmail.com

linkedin.com/in/hadidwirsty | github.com/hadidwirsty | hadidwirsty.vercel.app

SUMMARY

Frontend Engineer (B.S. in Computer Science from UGM, GPA 3.74/4.00) with 2 years of professional experience developing enterprise web applications and tools using TypeScript, React, and Next.js (App Router). Experienced in designing modular UI components, integrating RESTful APIs, managing asynchronous state (TanStack Query, Zustand), and maintaining cross-framework web applications (Next.js, Angular, Vue/Nuxt). Dedicated to writing clean code, collaborating effectively in cross-functional teams, and ready to deliver immediate value.

TECHNICAL SKILLS

Core Languages & Frameworks: TypeScript, JavaScript (ES6+), React, Next.js (App Router), HTML5, CSS3
UI & Styling: Tailwind CSS (v3 & v4), shadcn/ui, Ant Design, Radix UI, Base UI, Responsive Web Design
State & Data Management: TanStack Query (React Query), Zustand, Redux, React Hook Form, Zod, TanStack Table, Recharts
Working Proficiency: Angular, Vue.js, Nuxt, Blazor (C#/.NET)
Tools & Ecosystem: Git, GitLab, GitHub, Bitbucket, Postman, Vite, RESTful API Integration, AI-assisted development

PROFESSIONAL EXPERIENCE

PT Sigma Cipta Caraka (Telkomsigma) — Junior Programmer Nov 2024 – Oct 2026

Yogyakarta, Indonesia (On-site) · Contract

Developed and maintained frontend interfaces and security across 10 enterprise web applications (B2B and internal Telkom Group) using Next.js, React, Angular, Vue/Nuxt, and Blazor. Executed daily Agile/Scrum cycles alongside Scrum Masters (SM) and Business Analysts (BA) to refine user requirements, translated System Analyst specifications and UI/UX Designer mockups into modular code, integrated API contracts with Backend Engineers, and collaborated with Quality Assurance (QA) on functional testing and bug remediation for production releases.

- **Whistleblowing System (Internal WBS):** Developed internal Whistleblowing System web application interfaces for Telkomsigma's WBS Management Team to handle corporate ethics and governance violation cases (ISO 37002) using Next.js (App Router), React 19, TypeScript, Tailwind CSS v4, and TanStack Query; implemented executive analytics dashboards with Recharts, multi-stage case assessment data tables (validation-verification and inspection), and multi-channel report registration forms (letter, phone, and email); designed evidence file upload security layers based on binary file signature inspection (magic bytes) and ClamAV antivirus scanning integration; integrated multilingual support (i18next) and configurable questionnaire management modules; maintained role-based access control (RBAC).
- **MONARA (Christmas, New Year & Ramadan Monitoring):** Developed the frontend for the IT service ticket operations monitoring web application supporting the Service Desk team using Next.js (App Router), React 19, TypeScript, Tailwind CSS, and Radix UI; implemented ticket status monitoring dashboards with automated polling updates (30-second intervals), Recharts analytics, work shift and about 40 service-provider units master data modules during national holiday monitoring, and handling evidence upload forms; designed duty shift schedule validation workflows; integrated REST APIs with TanStack Query and Zustand; maintained role-based access control (RBAC).
- **Info Tender (LPSE & SiRUP):** Developed the frontend for the government procurement market intelligence web application supporting the Sales Support team using React 18, TypeScript, Vite, Tailwind CSS, and Radix UI; implemented procurement analytics dashboards (Recharts), LPSE tenders and SiRUP planning catalogs (TanStack Table), side-by-side data comparison tools, and scraping parameter configuration modules (KBLI keywords); designed an automated route-integrated user session dwell-tracker; integrated REST APIs with TanStack Query and Zustand; maintained role-based access control (RBAC).
- **Alisa 2.0 (Smart Contracting):** Developed the Smart Contracting module and micro-frontend Host Shell within a micro-frontend architecture (Module Federation) on the frontend for Infomedia Nusantara's enterprise contract management system using Vite, React 19, Ant Design 5, Tailwind CSS, and Module Federation; implemented legal order review workflows, contract type and stage configuration modules, and client-side PDF document previews (@react-pdf/renderer); designed drag-and-drop form builder interfaces; integrated REST APIs with TanStack Query and Zustand; maintained federated routing consistency (TanStack Router).
- **IS-WARE (Proof of Concept – PT KBI):** Developed an integrated warehouse receipt management system web prototype in a 2-week sprint for the technical proposal to PT Kliring Berjangka Indonesia (Danareksa Group) using Next.js (App Router), React 19, TypeScript, and Tailwind CSS; implemented warehouse receipt issuance workflows, insurance and inspection agency (LPK) document integrations, audit trail tracking, and commodity/warehouse master data; integrated REST APIs with TanStack Query and Zustand; maintained role-based access control (5 user roles), helping the technical proposal achieve rank #1 in client evaluation.
- **IMAPS BPJS Kesehatan:** Developed the frontend for the BPJS Kesehatan enterprise fixed asset lifecycle management application using Angular 18, TypeScript, and Ant Design (NG-ZORRO) to digitize inventory and audit accountability across nationwide branch offices; implemented the asset directory, multi-workflow approval modules (multi-tab asset approvals), deletion proposal flows, and user management; integrated strict-typed REST APIs and configured anti-clickjacking security headers.
- **CART (Continuous Automated Red Teaming):** Maintained and enhanced frontend interfaces for the CART vulnerability management and cyber threat intelligence web application to monitor corporate attack surfaces using Nuxt 3, Vue.js, TypeScript, and Tailwind CSS; implemented security testing package configuration modules (packages), client domain management, and scan template modals; integrated schema-validated forms (Vee-Validate + Yup) with REST APIs and Pinia state management; maintained design system consistency across application layouts.

PROFESSIONAL EXPERIENCE (CONTINUED)

PT Sigma Cipta Caraka (Telkomsigma) — Project Extensions Nov 2024 – Oct 2026

- **Caterine (Change Management):** Maintained Change Management module interfaces for Telkomsigma's enterprise IT Service Management (ITSM) platform using Vue 3 (Composition API), TypeScript, Vite, Tailwind CSS, and Pinia, resolving bug-fix tickets and Change Request (CR) tasks; implemented Change Advisory Board (CAB) approval workflows (assign, re-assign, and remove approvers), a 35-item mandatory justification document matrix, and technical task assignment modules; designed role-based access validation for change coordinators; integrated REST APIs with local pending state management; maintained unit testing and change verification workflows.
- **PIS MARS (Pertamina International Shipping):** Developed and maintained enterprise web portal interfaces and content management systems (CMS) for PT Pertamina International Shipping using C#, .NET 8.0, ASP.NET Core, and Blazor Server (Interactive Server Mode) within a microservices architecture; standardized base component inheritance and lifecycle execution across the Oktaf.UI Razor component library across hundreds of component files; implemented null deserialization safeguards and stability enhancements on the Form Builder and CMS editor; designed multi-level navigation interfaces (StickyMenu) with step progress indicators; integrated Mock Authentication Middleware across 6 backend microservices to simulate role-based authorization (RBAC) in local environments; maintained Docker containerization configurations.
- **Enterprise Web Applications Maintenance (Managed Services & Operations):** Developed frontend updates, resolved bug-fix tickets, and implemented frontend security remediations across 2 enterprise web applications using Vue.js, Nuxt.js, TypeScript, and Tailwind CSS; implemented data sanitization composables (useSanitize, useSvgSanitizer) and Content Security Policy (CSP) headers to harden against Cross-Site Scripting (XSS); designed login redirect URL sanitization to prevent Open Redirect vulnerabilities; implemented Server-Side Rendering (SSR) compatibility guards ensuring stability in Node 22 environments; tested and fixed Purchase Order ID parsing logic and public REST API integrations.

Tumbuhin Digital — Frontend Engineer May 2026 – Jun 2026

Yogyakarta, Indonesia (Remote) · Part-Time

- Designed and implemented cart state management for a commercial bulk-orders e-commerce website using Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS v4, Zustand, and TanStack Query; integrated optimistic UI updates with automated state rollback on network disruptions; developed multi-step checkout workflows and split payment settlement verification; implemented a granular item-level order fulfillment panel featuring airway bill card de-duplication; and maintained client-side input sanitization (isomorphic-dompurify) alongside Recharts analytics visualizations.

Telkom Indonesia — Developer Jan 2023 – Dec 2023

Jakarta, Indonesia (Remote) · Internship

- Developed a telecommunication operational analytics web prototype for the Netmonk ecosystem (PT Telkom Indonesia) using React, Vite, Tailwind CSS, Redux Toolkit, Node.js (Express), and MongoDB; implemented regional service order tracking workflows (NCX and Scone) across 7 regional divisions (TREG) and 40+ branch offices (Witel); designed access security architectures for embedded Metabase dashboards leveraging cryptographic JWT signing with 10-minute expiration windows (defended as undergraduate thesis at UGM, GPA 3.74/4.00); integrated dual-token authentication featuring refresh token rotation and silent re-authentication via RTK Query; and maintained codebase reliability through Vite 6 toolchain modernization and remediation of 101 nested dependency vulnerabilities.

SELECTED PROJECTS

HiBlow Fleet — Personal Project (github.com/hadidwirsty/hiblow-fleet) 2026

- Designed and developed a full-stack operations and financial management web application for a bulk cement truck fleet using Next.js 16 (App Router leveraging Server Components and Server Actions), React 19, TypeScript, Tailwind CSS v4, and Drizzle ORM (PostgreSQL); implemented automated freight tariff calculations across 296 national cement factory routes, PPh 23 tax deductions (1.2%), fleet expense tracking, and monthly investor profit-sharing workflows; designed a Pure Domain Engine validated by 297 automated Vitest tests (100% pass); integrated Better-Auth authentication with role-based access control (RBAC); maintained interactive Recharts analytics dashboards.

Tech: Next.js (App Router, RSC, Server Actions), TypeScript, Tailwind CSS v4, shadcn/ui, PostgreSQL (Drizzle ORM), Better-Auth, Vitest, Recharts, @tanstack/react-table, Zustand

EDUCATION

Universitas Gadjah Mada (UGM) — Bachelor of Science in Computer Science Sep 2020 – Aug 2024

Yogyakarta, Indonesia · GPA: 3.74 / 4.00

Thesis: Security Access of Embedded Metabase Dashboards using JSON Web Token on Netmonk Web Analytics Prototype.

CERTIFICATIONS

- **Menjadi React Web Developer Expert** — Dicoding Indonesia (Valid Oct 2024 – Oct 2027)
- **Belajar Tools Front-End Web Intermediate** — Dicoding Indonesia (Valid Oct 2024 – Oct 2027)
- **React Essential Training** — LinkedIn Learning (Issued Jul 2025)
- **Cloud Practitioner Essentials (AWS Cloud Basics)** — Dicoding Indonesia (Valid Sep 2024 – Sep 2027)

ACHIEVEMENTS & LEADERSHIP

- **3rd Place, Data Analysis Category** — DEXA-DIKE Innovation Award 2022 (DIKE Lab RPDL & Dexa Group)
- **Finalis** — Hackathon HackGov UGM 2021
- **Head of Talent & Interest Division** — HIMAKOM UGM (Feb 2022 – Feb 2023): Coordinated division programs and student talent development.
